

Guide to Gridreferencefinder

This is an extremely useful web-based utility, found at gridreferencefinder.com/os.php (if the link doesn't open for you, copy the address and paste it in to your browser's address bar)

To view a grid reference as a map point

Enter the grid reference (2 letters then 6 or more digits) in the labeled box to the left of the map, then press Go. A location pin will appear on the map. (If using a mobile device you will need to tap the "Expand" button as shown in the image. The map can be moved with one finger, and zoomed with 2 fingers.)

To exit full screen mode, click the Expand button again.

To find the grid reference for a point on the map, open the map using the expand button. Move and zoom the map as necessary. Left click (or long press) on the map to place a pin at your chosen spot. Click or tap on the pin to see the grid reference.
